#### Country background and economic overview

As Europe's largest economy and second most populous nation (after Russia), Germany is a key member of the continent's economic, political, and defense organizations. European power struggles immersed Germany in two devastating World Wars in the first half of the 20th century and left the country occupied by the victorious Allied powers of the US, UK, France, and the Soviet Union in 1945. With the advent of the Cold War, two German states were formed in 1949: the western Federal Republic of Germany (FRG) and the eastern German Democratic Republic (GDR). The democratic FRG embedded itself in key Western economic and security organizations, the EC, which became the EU, and NATO, while the Communist GDR was on the front line of the Soviet-led Warsaw Pact. The decline of the USSR and the end of the Cold War allowed for German unification in 1990. Since then, Germany has expended considerable funds to bring Eastern productivity and wages up to Western standards. In January 1999, Germany and 10 other EU countries introduced a common European exchange currency, the euro. In January 2011, Germany assumed a non-permanent seat on the UN Security Council for the 2011-12 term.

The German economy - the fifth largest economy in the world in PPP terms and Europe's largest - is a leading exporter of machinery, vehicles, chemicals, and household equipment and benefits from a highly skilled labor force. The modernization and integration of the eastern German economy - where unemployment can exceed 20% in some municipalities - continues to be a costly long-term process, with annual transfers from west to east amounting in 2008 alone to roughly \$12 billion. Reforms launched by the government of Chancellor Gerhard SCHROEDER (1998-2005), deemed necessary to address chronically high unemployment and low average growth, contributed to strong growth in 2006 and 2007 and falling unemployment, which in 2008 reached a new post-reunification low of 7.8%. These advances, as well as a government subsidized, reduced working hour scheme, have helped to explain the relatively modest increase in unemployment during Germany's 2008-09 recession - the deepest since World War II. GDP grew just over 1% in 2008 and contracted roughly 5% in 2009. Germany crept out of recession in the second and third quarters of 2009, thanks largely to rebounding manufacturing orders and exports primarily outside the Euro Zone - and relatively steady consumer demand. The German economy probably will recover to about 1.5% growth for the year 2010. However, a relatively strong euro, tighter credit markets, and an anticipated bump in unemployment could cloud Germany's medium-term recovery prospects. Stimulus and stabilization efforts initiated in 2008 and 2009 and newly introduced tax cuts are expected to increase Germany's record budget deficit, which is expected to exceed 5% of GDP in 2010. The EU has given Germany until 2013 to get its consolidated budget deficit below 3% of GDP. A new constitutional amendment likewise limits the federal government to structural deficits of no more than 0.35% of GDP per annum as of 2016.

### **Country statistics**

| Indicator                | Measure   | Rank |  |  |
|--------------------------|---|------|--|--|
| Geography                |   |      |  |  |
| Area                     | 357,022 sq km   | 63   |  |  |
|                          | land: 348,672 sq km                                   |      |  |  |
|                          | water: 8,350 sq km                                    |      |  |  |
| Coastline                | 2,389 km  |      |  |  |
| Natural resources        | coal, lignite, natural gas, iron ore, copper, nickel, |      |  |  |
